

# SOC Analyst L1: Your Role on the Front Line

## Monitor & Triage Alerts

Primary responsibility is watching SIEM dashboards for security alerts. When an alert fires, you perform initial triage - is this a real threat or false positive? You gather context, check logs and make the critical first decision.

## Analyze & Document

For each alert, you analyze relevant logs (Windows Event, firewall, proxy), identify indicators of compromise (IOCs) and document findings clearly.

Your documentation helps L2/L3 or IR take action.

## Escalate or Close

Based on your analysis, you decide: close as false positive or escalate to L2/L3 for deeper investigation.

This decision requires solid understanding of attack patterns and organizational risk.

## Noted

L1 analysts are the gatekeepers - you filter noise from real threats.

L2 analysts perform deep-dive investigation.  
L3 handles advanced threat hunting.

Your role ensures no legitimate threat slips through unnoticed.

shifts are typically 8/12 hours in 24/7 rotation. Requiring quick thinking.
