

The 3 SOC Operating Models

1. In-House (Internal) SOC

SOC Team Structure

A company builds and runs its own SOC internally using its own people, tools, and processes.

MSP vs MSSP

The Key Differences

IT Operations

Service provider focused on **managing IT operations**

Network / System Health Monitoring

Ensures that **IT systems** are running smoothly

Management

Network systems are **managed, updated, and maintained**

MSP Role

Manages a **DEFINED** set of agreed services

Network

Proactively **manages and maintains** infrastructure and solutions

Support

Provides **service and help for operations**

Aims

Meet **business operation** objectives

IT Security

Service provider focused on **managing IT security**

Security Monitoring / Defense

Ensures that **IT security** systems are overseen and protected at all times

Management

Security systems are **monitored constantly** to be as secure as possible

MSSP Role

Guards against constantly **EVOLVING** threats

Network

Proactively **monitors and defends** against cyberattacks

Support

Takes **proactive action when a threat is encountered**, using best practices for business continuity and disaster recovery

Aims

Meet **modern and future compliance and security** goals

02

Core Concept

The 3 SOC Operating Models

2. Outsourced / Managed SOC (MSP/MSSP SOC)

A third-party security company (MSSP) provides SOC services to multiple client organizations.

MSP : Managed Service Providers

MSSP : Managed Security Service Providers

The 3 SOC Operating Models

3. Hybrid SOC (Co-Managed SOC)

A shared responsibility model between:

- Internal SOC team AND
- External MSSP
