

Phase 3: The Arsenal

Don't need to code like a dev, but must query like a detective.

Weapons to master (Not all are written)

Required proficiency level (0-10)

i) SIEM (Splunk/Sentinel) 10

ii) EDR (CrowdStrike) 9

iii) Ticketing (Jira, ServiceNow) 8

iv) Email Security 7

v) Network Logs (Firewall) 9

vi) Threat Intel (VirusTotal) 6

SIEM (The Brain)

Splunk, Sentinel, QRadar. It collects logs.

Task: Learn SPL (Splunk) or KQL.

You must know how to filter like:

'index = firewall src_ip = 10.10.10.5

action = blocked'

Security Information and Event Management

EDR (The Hands)

Endpoint Detection and Response
CrowdStrike, Microsoft Defender,
Sentinel One.

It watches the Endpoint.

Task: Check process tree. Did 'explorer.exe' spawn 'powershell.exe'? That is malicious.

Ticketing (The Logbook)

ServiceNow, Jira

Task: Write clear, concise notes.

"User downloaded file X. Hash matches malware. Host isolated."

KPIs: Mean time to detect (MTTD)

Response time (MTTR)

Accuracy

Escalation Quality
